

AMENDMENT OF SPECIFICATION

Please amend the present fifth full paragraph, beginning on page 28, line 17, of the specification with the following amended paragraph.

Figure 20 shows a demultiplexing device 113 in the remote receiver terminal. The demultiplexing device 113 is connected to a BSC 114 and the Ethernet network 124. The BSC 114 is connected to an E1 interface 115, and the Ethernet network 124 is connected to a port 123. The demultiplexing device 113, similar to the multiplexing device 100, includes a E1 interface 115, a decompressor 116, a compressor 117, a formatting unit 118, a deformatting unit 120, a prediction unit 121, a buffer memory 122, and a port 123. The formatting unit 118 and deformatting unit 120 of the demultiplexing device 113 are connected to a modem 119.
